

## SPRINT -3

**Project Name:**

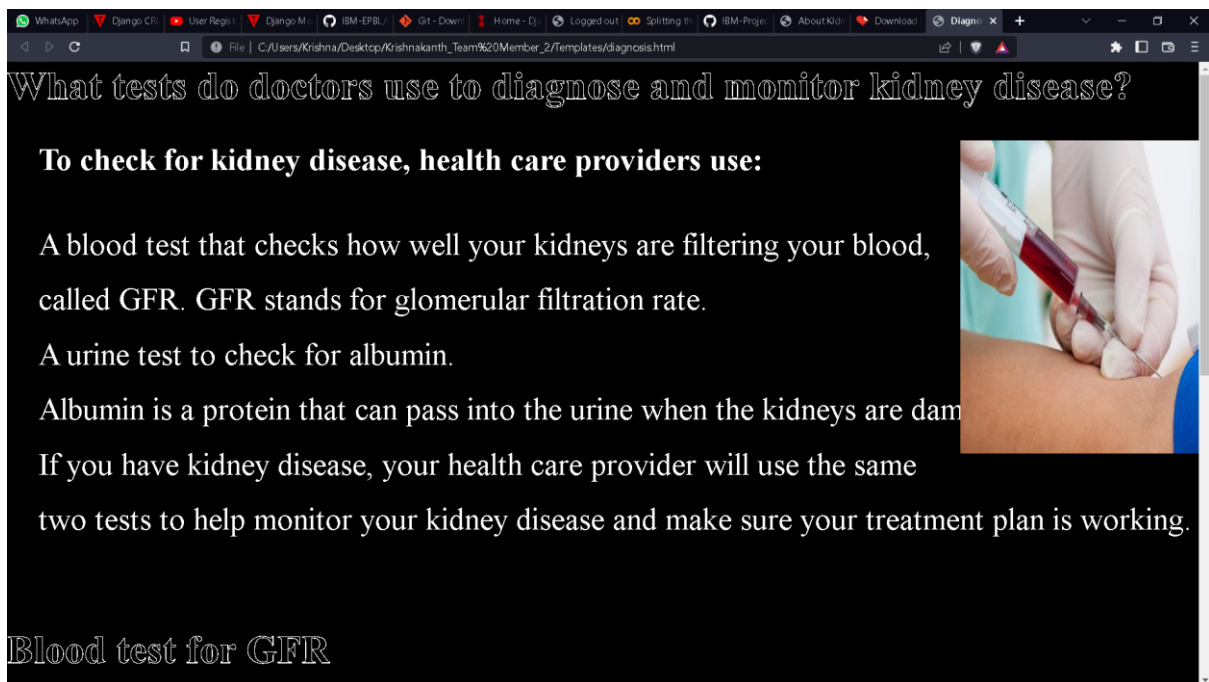

**Early detection of chronic kidney disease using Machine Learning.**

**Team ID:**

**PNT2022TMID48329**

### DIAGNOSIS PAGE

**This page contains diagnosis about CKD.**

## Blood test for GFR

Your health care provider will use a blood test to check your kidney function.

The results of the test mean the following:

A GFR of 60 or more is in the normal range.

Ask your health care provider when your GFR should be checked again.

A GFR of less than 60 may mean you have kidney disease.

Talk with your health care provider about how to keep your kidney health at this level.

A GFR of 15 or less is called kidney failure.
